

Discovery Call Script

Freelance Web Development

Phase 1: The Introduction (2-3 Minutes)

Goal: Build rapport, set the agenda, and establish authority.

"Hi [Client Name], thanks for jumping on the call today. I've been looking forward to learning more about [Company Name].

Just to give you a quick roadmap for our call: I'd like to start by asking you some questions to understand your business goals and current challenges. If it feels like a good fit, I'll explain how I work and how I can help. Finally, we'll wrap up with next steps for a proposal. Does that sound like a good plan?"

Phase 2: 8 Key Discovery Questions

Goal: Dig into the 'why' behind the project and identify high-value pain points.

1. **The Core Objective:** "If we were sitting here 12 months from now and this project was a massive success, what would that look like for your business?"
2. **The Problem:** "What is the biggest frustration you're currently facing with your existing website (or lack thereof)?"
3. **The Audience:** "Who is your ideal customer, and what is the primary action you want them to take when they land on your site?"
4. **The Content Strategy:** "Do you have existing branding, copy, and photography ready, or is that something you're looking for guidance on?"
5. **Technical Requirements:** "Are there any specific 'must-have' features like e-commerce, third-party API integrations, or a specific CMS you prefer?"
6. **The Competition:** "Who are 2-3 competitors you admire, and what do you feel they are doing better than you digitally?"
7. **Timeline:** "Do you have a specific hard deadline or a business milestone (like a product launch) that this site needs to be ready for?"
8. **Investment Range:** "Do you have a designated budget range set aside for this project to ensure we're prioritizing the right features?"

Phase 3: Presenting Your Services

Goal: Position yourself as a consultant/partner, not just a "coder."

"Based on what you've shared, it sounds like your main priority isn't just a 'pretty site,' but a tool that helps you [reduce manual admin/increase leads/scale sales].

My approach to web development focuses on three pillars:

- **Strategy:** Aligning the site structure with your user's journey to maximize conversions.
- **Performance:** Building a fast, responsive, and SEO-friendly foundation.
- **Hand-off:** Providing you with a system you can actually manage without needing a developer for every small text change."

Phase 4: The Close & Next Steps

Goal: Pivot to a proposal and maintain momentum.

"I have a very clear picture of what you need. From here, I'll put together a formal proposal outlining two or three options for how we can approach this, along with exact pricing and timelines.

I can have that over to you by [Day of the week]. If the proposal looks good, we can have a quick 10-minute follow-up to finalize the details and get started.

Before we hop off, are there any other questions I can answer for you today?"
